Executive Summary

Motivated Full-Stack Developer specializing in SaaS application development, business automation systems, and scalable web solutions using PHP, MySQL, React.js, Node.js, HTML, CSS, and JavaScript. Experienced in developing production-ready billing platforms, IoT-based applications, and responsive business software. Passionate about solving real-world business problems through technology with strong analytical and problem-solving skills.

Technical Skills

Programming Languages	: PHP, JavaScript, Node.js, SQL, HTML5, CSS3
Frameworks & Libraries:	: React.js, Express.js, Tailwind CSS
Databases:	: MySQL, SQLite
Tools & Platforms:	: Git & GitHub, VS Code, Postman, FileZilla, XAMPP, Arduino IDE
Other Technologies	: REST API Development, SaaS Architecture, Multi-Tenant Systems, PDF Report Generation, Responsive UI Development, Authentication & Authorization

Soft Skills

- Problem Solving
- Communication
- Team Collaboration
- Adaptability
- Time Management
- Product Thinking
- Creative Research & Storytelling

Professional Experience

BillMint | Freelance SaaS Product | 2026 – Present

Role: Full-Stack SaaS Developer

Responsibilities:

- Developed a scalable SaaS-based billing and business management application for multiple business categories.
- Built complete frontend and backend architecture using PHP, MySQL, HTML, CSS, and JavaScript.
- Designed responsive user dashboards, invoice systems, billing workflows, and customer management modules.
- Implemented authentication, secure login systems, and database management features.
- Optimized application performance and workflow efficiency for small and medium-sized businesses.
- Created customizable billing solutions adaptable for different industries and business requirements.
- Worked on UI/UX improvements to simplify invoice generation and daily business operations.
- Enhanced the platform with SaaS-ready architecture for future scalability and tenant management.
- Managed deployment, testing, debugging, and feature enhancements independently.

Impact:

- Successfully transformed a traditional billing software into a scalable SaaS platform.
- Reduced manual billing effort and improved operational efficiency for business users.
- Built a production-ready application capable of supporting multiple businesses on a single platform.

- Improved user accessibility with responsive and user-friendly interface design.

Academic Projects

IoT Monitoring & Automation System | Academic Project

Role: IoT & Full-Stack Developer

Technologies Used:

ESP32, React.js, Node.js, SQLite

Responsibilities:

- Developed a complete IoT-based monitoring and automation system integrating both hardware and software components.
- Programmed and configured ESP32 microcontroller for real-time device communication and automation workflows.
- Integrated servo motors for automated mechanical movement and control operations.
- Implemented IR sensors for object detection and smart system triggering.
- Configured LCD display modules to show real-time device status, sensor values, and system outputs.
- Built backend APIs and server-side functionalities using Node.js for device data processing.
- Developed interactive frontend dashboards using React.js for live monitoring and control.
- Managed local database storage and real-time data handling using SQLite.
- Worked on hardware-software integration between sensors, controllers, and web application modules.
- Performed testing, debugging, and optimization of IoT components and application performance.

Impact:

- Successfully demonstrated real-time IoT monitoring and automation workflow.

- Built a functional smart system integrating ESP32, sensors, motors, and web technologies.
- Improved understanding of embedded systems, IoT architecture, and full-stack application development.
- Developed an efficient and scalable academic IoT solution with real-time device interaction.

Education

Bachelor's Degree in Computer Science

Government Arts College (Autonomous), Kumbakonam – 2024

Master's Degree in Computer Science

Government Arts College (Autonomous), Kumbakonam – 2026

Awards & Accomplishments

- Built and deployed production-ready SaaS billing software independently.
- Developed full-stack business automation applications using modern web technologies.
- Created scalable multi-business billing management platform.
- Hands-on experience in frontend, backend, and database architecture.
- Continuously learning advanced SaaS system design and scalable application development.

Additional Information

Languages Known:

- Tamil – Native
- English – Professional Working Proficiency

Areas of Interest:

- SaaS Product Development
- Full-Stack Web Development
- Business Automation
- System Architecture
- UI/UX Design
- Content Creation
